

CS 33

Multithreaded Programming VII

Implementing Mutexes

- **Strategy**
 - make the usual case (no waiting) very fast
 - can afford to take more time for the other case (waiting for the mutex)

Futexes

- **Safe, *efficient* kernel conditional queueing in Linux**
- **All operations performed atomically**
 - `futex_wait(futex_t *futex, int val)`
 - » **if `futex->val` is equal to `val`, then sleep**
 - » **otherwise return**
 - `futex_wake(futex_t *futex)`
 - » **wake up one thread from `futex`'s wait queue, if there are any waiting threads**

Ancillary Functions

- `int atomic_inc(int *val)`
 - **add 1 to** `*val`, **return its original value**
- `int atomic_dec(int *val)`
 - **subtract 1 from** `*val`, **return its original value**
- `int CAS(int *ptr, int old, int new) {`
 - `int tmp = *ptr;`
 - `if (*ptr == old)`
 - `*ptr = new;`
 - `return tmp;``}`

Attempt 1

```
void lock(futex_t *futex) {  
    int c;  
    while ((c = atomic_inc(&futex->val)) != 0)  
        futex_wait(futex, c+1);  
}
```

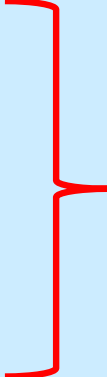

```
void unlock(futex_t *futex) {  
    futex->val = 0;  
    futex_wake(futex);  
}
```

Attempt 2

```
void lock(futex_t *futex) {
    int c;
    if ((c = CAS(&futex->val, 0, 1) != 0)
        do {
            if (c == 2 || (CAS(&futex->val, 1, 2) != 0))
                futex_wait(futex, 2);
            while ((c = CAS(&futex->val, 0, 2)) != 0))
        }

void unlock(futex_t *futex) {
    if (atomic_dec(&futex->val) != 1) {
        futex->val = 0;
        futex_wake(futex);
    }
}
```

Memory Allocation

- **Multiple threads**
 - **One heap**
- 
- Bottleneck?**

Solution 1

- **Divvy up the heap among the threads**
 - each thread has its own heap
 - no mutexes required
 - no bottleneck
- **How much heap does each thread get?**

Solution 2

- **Multiple “arenas”**
 - each with its own mutex
 - thread allocates from the first one it can find whose mutex was unlocked
 - » if none, then creates new one
 - deallocations go back to original arena

Solution 3

- **Global heap plus per-thread heaps**
 - threads pull storage from global heap
 - freed storage goes to per-thread heap
 - » unless things are imbalanced
 - then thread moves storage back to global heap
 - mutex on only the global heap
- **What if one thread allocates and another frees storage?**

Malloc/Free Implementations

- **ptmalloc**
 - based on solution 2
 - in glibc (i.e., used by default)
- **tcmalloc**
 - based on solution 3
 - from Google
- **Which is best?**

Test Program

```
const unsigned int N=64, nthreads=32, iters=100000000;
int main() {
    void *tfunc(void *);
    pthread_t thread[nthreads];
    for (int i=0; i<nthreads; i++) {
        pthread_create(&thread[i], 0, tfunc, (void *)i);
        pthread_detach(thread[i]);
    }
    pthread_exit(0);
}

void *tfunc(void *arg) {
    long i;
    for (i=0; i<iters; i++) {
        long *p = (long *)malloc(sizeof(long) * ((i%N)+1));
        free(p);
    }
    return 0;
}
```

Not a Quiz

Which is fastest?

- a) glibc (i.e., standard Linux)**
- b) Google**

Compiling It ...

```
% gcc -o ptalloc alloc.c -lpthread
```

```
% gcc -o tcalloc alloc.c -lpthread -ltcmalloc
```

Running It (2014) ...

```
$ time ./ptalloc
real    0m5.142s
user    0m20.501s
sys     0m0.024s
$ time ./tcalloc
real    0m1.889s
user    0m7.492s
sys     0m0.008s
```

Running It (2023) ...

```
$ time ./ptalloc
real 0m0.666s
user 0m5.815s
sys 0m0.004s
$ time ./tcalloc
real 0m0.496s
user 0m4.197s
sys 0m0.008s
```

What's Going On (2014)?

```
$ strace -c -f ./ptalloc
```

```
...
```

% time	seconds	usecs/call	calls	errors	syscall
100.00	0.040002	13	3007	520	futex

```
...
```

```
$ strace -c -f ./tcalloc
```

```
...
```

% time	seconds	usecs/call	calls	errors	syscall
0.00	0.000000	0	59	13	futex

```
...
```

What's Going On (2023)?

```
$ strace -c -f ./ptalloc
```

```
...
```

% time	seconds	usecs/call	calls	errors	syscall
--------	---------	------------	-------	--------	---------

-----	-----	-----	-----	-----	-----
-------	-------	-------	-------	-------	-------

```
...
```

0.02	0.000001	0	5	1	futex
------	----------	---	---	---	-------

```
...
```

```
$ strace -c -f ./tcalloc
```

```
...
```

% time	seconds	usecs/call	calls	errors	syscall
--------	---------	------------	-------	--------	---------

-----	-----	-----	-----	-----	-----
-------	-------	-------	-------	-------	-------

```
...
```

0.26	0.000006	0	23	3	futex
------	----------	---	----	---	-------

```
...
```

Test Program 2, part 1

```
#define N 64
#define npairs 16
#define allocsPerIter 1024
const long iters = 8*1024*1024/allocsPerIter;
#define BufSize 10240
typedef struct buffer {
    int *buf[BufSize];
    unsigned int nextin;
    unsigned int nextout;
    sem_t empty;
    sem_t occupied;
    pthread_t pthread;
    pthread_t cthread;
} buffer_t;
```

Test Program 2, part 2

```
int main() {
    long i;
    buffer_t b[npairs];
    for (i=0; i<npairs; i++) {
        b[i].nextin = 0;
        b[i].nextout = 0;
        sem_init(&b[i].empty, 0, BufSize/allocsPerIter);
        sem_init(&b[i].occupied, 0, 0);
        pthread_create(&b[i].pthread, 0, prod, &b[i]);
        pthread_create(&b[i].cthread, 0, cons, &b[i]);
    }
    for (i=0; i<npairs; i++) {
        pthread_join(b[i].pthread, 0);
        pthread_join(b[i].cthread, 0);
    }
    return 0;
}
```

Test Program 2, part 3

```
void *prod(void *arg) {
    long i, j;
    buffer_t *b = (buffer_t *)arg;
    for (i = 0; i<iters; i++) {
        sem_wait(&b->empty);
        for (j = 0; j<allocsPerIter; j++) {
            b->buf[b->nextin] = malloc(sizeof(int) * ((j%N)+1));
            if (++b->nextin >= BufSize)
                b->nextin = 0;
        }
        sem_post(&b->occupied);
    }
    return 0;
}
```

Test Program 2, part 4

```
void *cons(void *arg) {
    long i, j;
    buffer_t *b = (buffer_t *)arg;
    for (i = 0; i<iters; i++) {
        sem_wait(&b->occupied);
        for (j = 0; j<allocsPerIter; j++) {
            free(b->buf[b->nextout]);
            if (++b->nextout >= BufSize)
                b->nextout = 0;
        }
        sem_post(&b->empty);
    }
    return 0;
}
```

Running It (2014) ...

```
$ time ./ptalloc2
real    0m1.087s
user    0m3.744s

You'll Soon Finish CS 33 ...

- You might
 - celebrate

- take another systems course

- » 320
 - » 1380
 - » 1660
 - » 1670
 - » 1680

- become a 33 TA

Systems Courses Next Semester

- **CS 320 (Intro to Software Engineering)**
 - you've mastered low-level systems programming
 - now do things at a higher level
 - learn software-engineering techniques using Java, XML, etc.
- **CS 1380 (Distributed Systems)**
 - you now know how things work on one computer
 - what if you've got lots of computers?
 - some may have crashed, others may have been taken over by your worst (and smartest) enemy
- **CS 1660/1620/2660 (Computer Systems Security)**
 - liked buffer?
 - you'll really like 1660
- **CS 1670/1690/2670 (Operating Systems)**
 - still mystified about what the OS does?
 - write your own!

The End

**Well, not quite ...
Database is due on 12/15**

Happy Coding and Happy Holidays!
